

System Analysis

ACI – 3 Steps for success

There are no problems, there are only challenges!

All challenges should end in a project whose aim is to analyze business processes with a view to identifying areas of improvement. The aim of system analysis is to present the challenge in a way that promotes clear understanding by everyone involved by clearly highlighting affected areas.

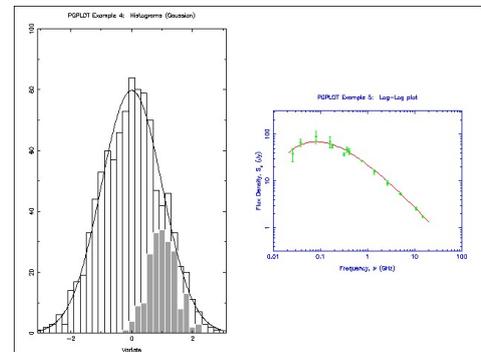

What are the results of System Analysis?

- A detailed description of the process.
- Efficient control of the IT tools used.
- Verification of the communication interfaces.
- Proposal for an efficient targeted process.

The system analysis utilizes various types of analyzes to clarify the challenge:

(Extract)

- Global Task Analysis – Time Series Plots
- Structural Analysis – Control Charts
- Facilities Analysis
- Documentation Analysis
- Communication Analysis
- Frequency Plots
- Activity Analysis

Concept for Improvement

Based on the results of the system analysis it is easy to find areas which need adjustments. And YES, this could be done by the customer himself HOWEVER, experience has taught us that it is not so easy to overcome internal departmental barriers. Because of this, we recommend external support from **mib Heinen**. **mib Heinen** achieves results through a pragmatic, can-do approach, successfully implementing it's concepts in the last 15 years across the globe.

Implementation, or putting into effect!
You have a problem but can't clearly comprehend it, or don't seem to get it under control?

We would like to help you! Because we are convinced of our performance, the implementation phase can also be rewarded in a success-oriented manner!

Have you got any further questions? –
